

# Decommissioning Support Services

Utilities manage the lifecycle of their generating stations within the following business strategic framework:

- ◆ Facility reuse, repowering, or service life extension;
- ◆ Environmental compliance;
- ◆ Capital planning and schedule management;
- ◆ Risk management, including retirement and system availability planning; and
- ◆ Potential asset reuse within their own system, and unit or entire plant sales.

Foth highly-skilled engineers and scientists can support your environmental compliance requirements for generation facility decommissioning, including:

- ◆ Partnering alongside decommissioning subcontractors for environmental remediation, testing and CQA solutions.

- ◆ Impoundment and landfill design, engineering and closure.
- ◆ Post-closure groundwater monitoring and reporting.
- ◆ Well abandonment and installation.
- ◆ Bathymetric and Geospatial site survey.
- ◆ Construction/As-built Specifications/Drawings.
- ◆ Construction Quality Assurance (CQA).
- ◆ Site Master Planning and Final End-Use Analysis.
- ◆ Assessment and analysis of impacted soil.
- ◆ Beneficial Re-use of CCR Material.
- ◆ Health and Safety Plan Compliance Review and Implementation.

Foth provides technical support through each stage of the decommissioning process.
