

# Transmission Services

Foth helps you reach your customers through technical and environmental services for the development and construction of networks. As the landscape of generation evolves and new transmission is required, utilities and service providers require a strong partner such as Foth, to navigate requirements and provide technical support. Foth engineers are experts in:

- ◆ Public/private utility assessments
- ◆ Route Identification
- ◆ Pre-certification identification assistance and screening of potential sites
- ◆ Grant identification and economic development assistance
- ◆ Wetland delineations and support for environmentally sensitive corridors
- ◆ Threatened and endangered species investigations
- ◆ Aviation restriction assessments
- ◆ State and federal regulatory agency coordination
- ◆ State certified site approval management
- ◆ Municipal approval process management
- ◆ Phase 1 environmental site assessment
- ◆ Phase 1 cultural resource investigations
- ◆ Land use planning and zoning support
- ◆ Infrastructure design and construction management
- ◆ Civil site layout and design
- ◆ Construction Quality Assurance (CQA)
- ◆ Access road design for challenging utility corridors
- ◆ GIS /Geospatial (sUAS) mapping
